

TOP 10 BENEFITS OF LASER THERAPY

- **ANTI-INFLAMMATION:** Laser Therapy reduces inflammation with vasodilation, activation of the lymphatic drainage system, and reduction of proinflammatory mediators. As a result, inflammation, erythema, bruising and edema are reduced.
- **ANALGESIC EFFECT:** Laser Therapy of diseased and damaged tissue produces a suppression of nociceptors, an increase of stimulation threshold, and an increased release of tissue endorphins. The result is a decreased patient perception of pain.
- **ACCELERATED TISSUE REPAIR AND CELL GROWTH:** Photons of light from laser penetrate deeply into tissue and accelerate cellular reproduction and growth. Laser light increases the energy available to the cells so that they can take on nutrients and get rid of waste products more quickly.
- **IMPROVE VASCULAR ACTIVITY:** Laser light significantly increases the formation of new capillaries in damaged tissue, this speeds the healing process, resulting in more rapid wound closures.
- **INCREASED METABOLIC ACTIVITY:** The energy from photons of laser light is captured by chemical complexes within the cell resulting in activation of enzyme systems and increased energy delivered into cellular metabolic processes.
- **TRIGGER POINTS AND ACUPUNCTURE POINTS:** Laser Therapy stimulates muscle trigger and acupuncture points without mechanical invasion to provide musculoskeletal pain relief.
- **REDUCED FIBROUS TISSUE FORMATION:** Laser Therapy reduces the formation of scar tissue.
- **IMPROVED NERVE FUNCTION:** Slow recovery of nerve functions in damaged tissue results in numbness and impaired limbs. Laser therapy accelerates nerve cell regeneration.
- **IMMUNOREGULATION:** Therapy laser photons have an effect on immune systems status through stimulation of immunoglobulins and lymphocytes. Laser therapy energy is absorbed by chromophores (molecular enzymes) that react to laser light. The enzyme flavomono-nucleotide is activated and starts the production of ATP, which is the major carrier of cellular energy and the energy source for all chemical reactions in the cells.
- **FASTER WOUND HEALING:** Laser light stimulates fibroblast development. Fibroblasts produce collagen, which is predominant in wound healing in damaged tissue. Collagen is the essential protein required to replace old tissue or to repair tissue injuries. As a result, laser therapy is effective on open wounds and burns.

North Main Animal Clinic

8505 North Main Street
Dayton, Ohio 45415

Clayton Animal Hospital

6313 Brookville Salem Road
Clayton, Ohio 45315
